LIRTC meeting with SGA on 3/30/11 at 7pm, Lowry 119

Matt gave background on initial Woodle implementation 5 years ago.

Student Feedback:
See grades, up to date
easy for teachers to use (teachers don't use moodle so they can't use it)
events postings (campus wide and group specific)
all class info in one place (documents, power points, etc.)
Ongoing thread between students and professors - find out things faster
 discussion board with other participants
 notifications
 don't want to have to check multiple systems
communication with faculty - text on some things but not everything, email is secondary
e-reserves - all course materials in one spot
multiple sign ins in separate systems - sign in once and all things connected
scotweb only for registration - dead, no one thinks about
 registration and grades only for most students
 interface in lms that pulls in scotweb info
pdfs open within the same window instead of new window
posting grades easily throughout semester
link on woodle to video clips on youtube or something similar
students get charged for going to watch movies at media library
 digital copies
 netflix for course
Mt St Joe's - movies for free on demand, just out of theaters
Google docs - work on stuff at the same time
 or widgets within system
 group projects at the same time
incorporate some sort of social aspect
 live chat / chatroom
 too personal could be too distracting
both chatroom and thread would be useful
nothing different with study abroad
 Skype
 web conferencing
 document sharing
turn-it-in
 love the idea of electronic submission
 as long as professors don't turn around and print it
forms instead of docs or pdfs

tools
 Skype

google docs
google scholar
prezi
zotero
wolfram - alpha
pb works
file sharing within group
wikis
microsoft office, open office, google doc
server based software or site-wide license
statistical software
    at least on every campus computer
    majors on their own computer

LIRTC meeting with Faculty, 4/5/11 at 11am in Kauke Tower

- no attendees

LIRTC meeting with Faculty 4/7/11 at 4pm in Kauke 034

public portion like Voices
    schedule
    syllabus
private part
    class things you don't want public
    grade book
    dropbox for assignments
    email tool
centralized for every class
    don't have to check multiple sites
single log-in
protected page is only pdfs
    have to use woodle for data, excel, etc.
    have to include links in a bunch of stuff
ability to comment
ability to upload mass commented files
wiki in woodle stinks
    forum also stinks
collaboration space for students
students confused as to where to go
have to include links everywhere
voices is easy to use

        good skill for students to learn

        easy to embed multimedia

feedback survey

        how to get questions on quiz without retyping everything

import past courses

like having a grade book

        not the one on woodle or voices

like group functions of woodle

        easy to keep track of who is in group

        grade by group

mass upload of files

like open source

like disconnect between scotweb and grade book

        would like option to auto-export

        most finesse grades at end

use of blogs

use of wiki

social media connection?

        twitter

        yammer

        limited characters

        chatroom

        discussion board

        rss reader

template for setting up formats

        with links

simplicity

glitches in woodle

        file names

        auto-links

        not intuitive

Transition

"now you're making me learn a new one"

time to transfer

building wiki for 2 years

        import

        ease of use

        maintain old sites for 2-3 years to give time to convert
